

IDENTITY MANAGER

Enterprise ID Software

ID badges are critical to an organization because they can be used for so many things. When implementing a Photo ID system, simply printing a badge is not enough. You want to ensure that your system will work seamlessly with any application that you implement in the future. BadgePass Identity Manager is the only 100% open badging platform in the industry, allowing for easy system expansion and seamless integration with any other card application on the market.

"BadgePass was an easy choice for us. The software allows us to easily create Photo IDs and use them with all of our other applications including Access Control and Mobile Tracking. Now, we never have to worry about whether or not something will work with our ID cards."

IT Director

Additional BadgePass Modules:

Visitor Manager

Access Manager

Time Manager

Technical Specifications:

Features:

File / ODBC Scheduled Sync Utility (Data Sync)	Alignment & Formatting Tools	Third Party Form Population/Screen Push
Active Directory™ Integration	Prompted Data Entry	Auto Record Retrieval via Card Scan
Save and Search Records	UV Printing	Plug-In Center
Configurable Search Criteria	Field Masking	National Sex Offender Check
Auto Create Security User	Background Color Fill	aptiQmobile Integration
